The one who has the highest demands needs a tool without making any compromise: MAXXPRO. The curved longitudinal outline of the ergonomic handles enables extremely high axial forces with very little effort. That is how a high application force is developed which effectively avoids the annoying slipping out of the screw, i.e. the so call Cam Out effect. The soft component on the edges provides a comfortable grip and enables the production of a maximum torque.

53100 Engineer's Screwdriver

To DIN 5264 and ISO 2380 standards
